Come meet Ecocarrier in MWC 2017 at Ontario (Canada) Pavilion Stand No. 7K50

At MWC 2017 in Barcelona, Spain

Ecocarrier's Augmented Reality (AR) and Virtual Reality (VR) Business Unit introduces ARA2Z, a project that has its business focus on/for the design and development of AR/VR-enabled Solutions as Managed Services that cater to needs of corporate clients in various industry/commerce space in marketing & sales promotion, design & construction, plant maintenance & field engineering, education & training, travel & tourism, medicine & health care etc.

Augmented Reality (AR) enables users to experience the world around them as is, but with the enhancement in the form of additional layers of digital content over and above Reality such as images, sound, video and text. Such contents information that is available and relevant to the user's specific situation at the time.

"We believe that AR should be an integral part of your everyday experiences, enabling you to enjoy what the real world has to offer but also enriching it by presenting relevant digital content additionally. We focus on creating a human-centric, contextual experience that is intricately connected to the user's specific needs in the moment" enthused Carl KS Teo, a proponent of the ARA2Z Project.

The technical competence of the company consists of a core team of highly skilled developers in Apps and other kinds of software development and gifted graphic designers working with and lead by CEO and CTO of the company who have many years of experience and proven successes in product innovations and service production in the ICT space.

The company has the strategic partnership and alliance and support of companies who are leaders in the AR and VR space and the support of computer scientists in digital disciplines currently teaching and/or doing research in related fields of investigation, experiments and development.

The company's AR-enabled App, named Virtuecor, is a solution that can be adopted and adapted for use by any business in interior design and furniture sales operation to great advantage for effective, cost/time efficient and convenient way for demonstration and visualization of concept and design without physical acquisition

Their AR-enabled and VR-enabled App, named ARVRREAL, is a bliss for architecture and real estate business for making effective presentation of concept, ideas and design completely with digital rendering of ideas and concept of designs – without any investment in physical construction or building.

ARA2Z specialize in the development of marker-less apps, games and solutions-as-managed services for AR Production and VR Production that can be operated by human gestures that can be effectively used/played in a Smartphone or a Tablet.

ARA2Z offer a unique way of making AR/VR Solutions available for use by businesses and industries, large or small, as managed services. The B2B2C customer gets to enjoy the advantage and benefits engendered by the managed services at low costs that represent the best value for money.

ARA2Z solutions incorporates the most advanced available techniques in the AR/VR space for best UX (User Experience), convenience and affordability.

Ecocarrier seeks strategic partners to cooperate with them in promoting their AR/VR enabled Solutions as Managed Services to B2B2C clients worldwide for use in all industry/commerce space presented at www.ara2z.com
