- ▶ Supports SMS, Voice Mail and Multi-party Call Conference
- ▶ Requires no change to the way you use your GSM handset
- ▶ No charge for receiving incoming calls when roaming in more than 65 countries
- ▶ Reseller Program offers excellent margins to reseller

RoamSIM / RoamFone is a service for business travelers that offers low-cost international telephone call service for making calls from and receiving calls at a roaming GSM handset without having to pay the regular Roaming Charge.

The service works as follows:

A subscriber to the RoamSIM / RoamFone service buys a RoamSIM or RoamFone and a certain amount of credit to cover the cost of usage from a reseller of the RoamSIM service.

The RoamSIM or RoamFone comes with a RoamSIM No. issued in the U.K. with country code <44>.

- (i) To make an outbound call from anywhere in any of the countries supporting the RoamSIM / RoamFone service
- Subscriber/user dials the Destination Number as <+>- <Country Code> - <Area Code> - <Telephone Number> on the keypad of the GSM handset
 - subscriber sees a message on the screen of the GSM handset that says, "Please wait - your call is being processed"
 - then the GSM Handset rings - a CallBack Call is received
 - subscriber presses the "Send/Yes" key of the GSM Handset to answer the CallBack Call
 - subscriber hears a message that says, "Please hold"
 - subscriber then hears the ringback tone of the call to the Destination Number
- (ii) When an inbound call is dialed by a caller to the RoamSIM No., the operation is as follows:
- caller dials the RoamSIM No.
 - the roaming handset rings
 - the subscriber/user answers the call
 - subscriber presses the "Send/Yes" key to answer the call and is instantly connected with the calling party

The inbound call is billed at the per minute rate for calling the mobile dialcode of the temporary local number that is assigned to the roaming handset by the local GSM operator. The rate is given by the rate calculator at www.roamsim.com.

No regular Roaming Charge is applicable to the outbound or inbound call described above.

There is no charge for unsuccessful or not completed inbound or outbound calls.

However, when the handset is roaming in one of 30 countries where the local GSM operator imposes a service charge to all foreign SIMs, a per minute surcharge is added to the applicable per minute rates for billing the outbound or inbound call.

But overall for the subscriber a saving of up to 85% is achieved with the use of the RoamSIM service.
