## MRESENCE - Presence in Mixed Reality

The best approximation to being there in one same physical space and in real time.

Future Talk TV features Carl Teo this month in its program that is available through [www.pegmedia.org](http://www.pegmedia.org).

MRESENCE is one of the various projects of Ecocarrier for Social Edification.

“MRESENCE” is formed of the notion of Presence in Mixed Reality. Mixed Reality is a term that describes a production of data and digital experience resulting from a mix (experience) of physical reality and digital reality – all made available to a user of a Smartphone connected to a high-speed mobile data service network.

It is designed to enable people who are geographically dispersed to communicate with one another over the Internet in Mixed Reality in ways that are approximately close to what or how they would do if they were together in one same physical space and time.

Through the operation of MRESENCE, the various parties achieve “See What I See”, “Touch What I Touch” and “Expression of Empathy over cyberspace” in their interactions which may be in a one-to-one, one-to-many, many-to-one and many-to-many configuration. Each party is typically either an Advice Seeker or an Advice Giver in the configuration.

MRESENCE service configuration consists of MRESENCE App for use by Advice Seeker running in a Smartphone and MRESENCE App for use by Advice Giver also running in Smartphone by 2 or more parties who are physically apart far or near and connected to the Internet and cloud-based MRESENCE Enablement Platform.

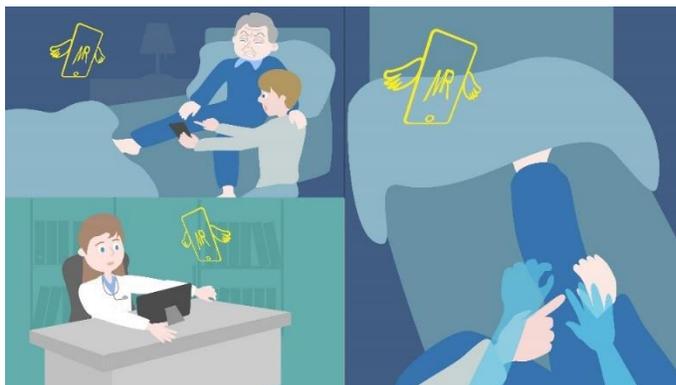

Corporations, institutions, and charity/humanitarian organizations are signing on to use MRESENCE to improve the efficacy and cost efficiency of their operation and for Blockchain-based greater security and better archiving of records of audio, video and text communication for posterity and for Big Data Analytics and AI Deep Learning implementations,

One of the most important features of MRESENCE operation is that it is very easy and quick to set up and simple to use and it is a very affordable and low-cost operation.

MRESENCE offers great advantages in

- Collaboration between Field Service Personnel and Expert in the Head Office,
- TeleMedicine,
- Online Distance Learning, and in
- TeleMeetUp among friends and loved ones.

MRESENCE enables the Greatest Efficacy and Highest Cost Efficiency of communication and interaction among parties who are geographically dispersed and are connected on the internet.

If you are a householder or a guardian faced with a medical emergency in the middle of the night in a country where 911/EMS service is not readily available, you would wish that you could get medical advice when you desperately need it from medical professionals in other parts of the world who are doing their day-shift and are willing and able to help.

If you are a team member of Doctors Without Borders providing emergency medical care in a make-shift clinic in a remote location in Africa and you had come upon a rare symptom and you need to consult your colleagues in research hospital in Germany about your observation for diagnosis and prognosis in an emergency situation, you would wish that you could use your Smartphone or your Tablet to let the research specialists see What You See and they direct you to Touch What They Touch in doing investigation and in providing emergency treatment.

If you and your wife who are resident in Canada, are the proud parents of a newborn child and you are showing off the baby to the grandparents (your own parents) who are resident in China, you would want to be able to let the grandparents “See What You See” and “Touch What you Touch” and hug and hold the infant in their (GrandPa’s or GrandMa’s) hands.

All of the above scenarios are made possible by MRESENCE.

Please address all communication on MRESENCE Project to [sales@ecocarrier.com](mailto:sales@ecocarrier.com).
