Virtuécor is an AR-enabled app that you can use to digitally furnish a vacant space indoors or outdoors with furniture items available for selection and placement.

You can also use Virtuécor to add items of décor to an existing furnished space.

All the items must first be made as digital assets ready for use.

Virtuécor app is purpose-made for each application to the requirement of a business. For large deployment that involves many furniture items and other items of décor, the digital assets for the items would reside in a cloud-based server that supports the operation and use of the app by a consumer in any physical location/situation.

Tell us what you need to help present your furniture items or interior décor ideas digitally, our specialists in digital designs and simulations will work on your requirement.

VIRTUÉCOR™

Digital Furnishing in Augmented Reality

All life decisions should be so safe!

*select it, place it, look at it,
add more pieces
change the color,
change the texture,
change the position
change the combination,
try another one,
place it another way,
start all over again*

*till you are happy with it*

You don't have to buy before you like it!
