

Presentation of Ecocarrier's Technology, Solutions and Service Provision

Ecocarrier Inc. possesses intellectual property, technology, solutions and digital assets and owns and operates cloud-based managed service provision of high-value and in great demand for deployment by SME and general consumers to greatly enhance the efficacy and efficiency and overall productivity of the business operation of the SME and to significantly extend the scope and reach of the addressable markets / audience across geography, language barriers and socio-economic and cultural constraints.

The technology and service provision enable the autonomous operationalization of workflow and service processes with

AI Agents built with TMU-LTM (GPT-LTM) with Long Term Memory integrated with Multi-Modal Communication Capability (WebRTC) and the Inimitable Functions of TMU Enablement Platform as stated in the presentation at
